Kieu Nam Hai

DevOps Engineer / SRE

Hanoi, Vietnam | williamkieuu-devops.cloud | github.com/chu0jz013 | williamkieu-devops@outlook.com | +84 961513848

Hey there! I'm William Kieu, a DevOps & Platform Engineer passionate about cloud-native systems. Here's a brief summary about me:
- 3+ years in Cloud / DevOps / SRE
- AWS infrastructure & Cloud solutions
- Kubernetes (RKE2) on-prem cluster operations
- Observability: ELK, Grafana, Loki, OpenTelemetry
- Tools: Grafana, Terraform, AWS CDK, Pulumi, Jenkins, GitLab CI, ArgoCD
- Strong teamwork & self-management
- Responsible, works well under pressure
- Good English communication

WORK EXPERIENCE

KIOTVIET TECHNOLOGY

DevOps Engineer / SRE | Sep 2025 - Present

Leading the modernization of legacy application platforms by migrating workloads from Docker Compose to on-prem Kubernetes. Built and operated RKE2 clusters, standardized GitOps-based delivery with ArgoCD, automated workflows with Argo Workflows, and established a full observability stack including ELK, Grafana, alerting, on-call rotation, and service-level monitoring.

- Automate everything
- Migrated legacy services from Docker Compose to Kubernetes on on-prem infrastructure.
- Built monitoring, alerting, on-call rotation, and incident response workflows for production systems.
- Defined and visualized SLI, SLO, and SLA metrics for individual services using Grafana dashboards.
- Improved platform reliability, deployment consistency, and operational scalability through automation-first practices.

FPT SOFTWARE

DevOps Engineer | Aug 2023 - Aug 2025

Worked on cloud infrastructure, CI/CD automation, and serverless application platforms across AWS environments.

- Designed and implemented scalable AWS infrastructure following best practices for reliability and security.
- Built Infrastructure as Code using Terraform and AWS CDK for automated resource provisioning.
- Developed CI/CD pipelines with Jenkins, GitLab CI, and AWS CodePipeline.
- Built serverless architectures using Lambda, API Gateway, Cognito, S3, and DocumentDB.
- Deployed and operated workloads on Kubernetes clusters (EKS, GKE).
- Implemented monitoring and logging to improve system observability.
- Collaborated with development teams to improve deployment workflows and system reliability.

FPT UNIVERSITY LABORATORY

Laboratory Intern | Mar 2023 - Aug 2023

- Provided guidance and training to team members.
- Developed backend software solutions using Java Spring Boot.
- Orchestrated integration of applications with AWS services.

BUILDING COMPANY PLATFORM & OBSERVABILITY SYSTEM

DevOps Engineer / SRE | Sep 2025 - Present

kiotviet.vn

Built a centralized platform engineering ecosystem for on-prem environments, focused on Kubernetes migration, GitOps automation, observability, and operational standardization. The platform enables automated service onboarding, dashboard provisioning, logging aggregation, and production-grade monitoring with scalable alerting and on-call processes.

- Migrated multiple services from Docker Compose to Kubernetes with standardized deployment patterns.
- Automated application delivery using GitOps with ArgoCD and workflow orchestration with Argo Workflows.
- Built reusable CI/CD pipelines to provision Grafana dashboards and monitoring assets for new services.
- Designed ELK-based logging architecture for high-volume application log ingestion and analysis.
- Implemented service observability with Grafana, including SLI/SLO/SLA dashboards per service.
- Established alerting pipelines and on-call rotation processes for production operations.
- Automated Grafana dashboard provisioning for newly deployed services through CI/CD pipelines.
- Managed and optimized RKE2 clusters for stability, scalability, and day-2 operations.

AI CODE ASSISTANT

DevOps Engineer | Feb 2025 - Aug 2025

Handled application versioning and release management for AI/LLM-based services. Built and managed CI/CD pipelines using Jenkins with shared libraries, and automated deployments using ArgoCD with GitOps workflows.

- Built and managed CI/CD pipelines using Jenkins and shared libraries.
- Automated deployments with ArgoCD following GitOps practices.
- Deployed and scaled LLM models on Kubernetes using Helm charts.
- Set up system monitoring with Prometheus, Grafana, and Loki.
- Implemented distributed tracing with OpenTelemetry to improve observability.

MASTER TAG SERVERLESS SYSTEM

Software Engineer & DevOps Engineer | Jun 2024 - Feb 2025

Developed a web-based platform to manage and visualize device tag relationships across the organization. The system supports search, real-time geolocation with Maps API, and data synchronization via scheduled backend jobs.

- Designed and implemented a fully serverless architecture using AWS services.
- Built frontend and backend components with React.js, TypeScript, and Node.js.
- Integrated AWS Lambda, DynamoDB, API Gateway, and Cognito for secure and scalable operations.
- Managed infrastructure with AWS CDK and automated CI/CD pipelines using AWS CodePipeline.
- Enabled seamless integration with external systems for real-time asset tracking and location-based insights.

AWS MICROSERVICE INFRASTRUCTURE

DevOps Engineer | Aug 2023 - Apr 2024

Implemented a scalable microservices architecture on AWS using ECS and Infrastructure as Code with Terraform. Focused on cost optimization and streamlined CI/CD pipelines for efficient deployment.

- Designed and provisioned AWS infrastructure with Terraform for full automation.
- Built microservices architecture using Amazon ECS with task scheduling, service discovery, and inter-service communication.
- Configured and managed S3, RDS, VPC, ALB, API Gateway, and Lambda for supporting services.
- Set up and maintained Jenkins server to manage CI/CD workflows, improving deployment efficiency and reliability.
- Optimized infrastructure for performance and cost, ensuring scalability and maintainability.
